

Temperature Sensor E52

CSM_E52_DS_E_21_6

A Wide Variety of High-precision Temperature Sensors

- Previous models with M3 screw connections have been joined by new models with ferrules to help reduce wiring work.
- A Temperature Sensor for Packaging Machines that accurately measures seal temperature has been added.
- The type, shape, length, and terminal shape can be selected to match the temperature to be measured, location, and environment.

 Refer to *Safety Precautions for All Temperature Controllers*.

■ Accessories

It is recommended that the following accessories be used for mounting Temperature Sensors.

Accessory	Temperature range	Mounting example	Page
Compression Fitting	600°C max.	Mounting with Compression Fitting  <p>Note: The Compression Fitting is not of airtight construction. Do not use the Compression Fitting for applications in which the exposure of the sensing object will cause problems.</p>	49
Loose Flange	400°C max.	Mounting with Loose Flange  <p>Note: 1. Use the Loose Flange in normal atmospheric pressure. The Loose Flange is not of airtight construction. 2. Use the Loose Flange at 400°C max. 3. Do not apply the Loose Flange to protective tubing diameters other than the applicable ones.</p>

Enclosed-terminal Models

E52-P□C-N

Dimensions

Dimensions are given in millimeters, except for the length (L), which is provided in centimeters.

Terminal box: The permissible temperature is 0°C to 90°C.

Note: 1. The terminals in the cap indicate polarity (A, B, b).

2. The length L is in centimeters, but “35” is 35 millimeters.

Therefore, for the E52-P35C-N: L = 35 (cm), the sheath length $L - 35 = 350 - 35 = 315$ mm.

Model Information

Custom-made models are available on request. Refer to page 4 for details.

Note: The length L is in centimeters, but “40” is 40 millimeters.

Therefore, for the E52-P35B-N: L = 35 (cm), the sheath length $L - 40 = 350 - 40 = 310$ mm.

Dimensions

Dimensions are given in millimeters, except for the length (L), which is provided in centimeters.

Note: 1. The length L is in centimeters, but “50” is 50 millimeters.
Therefore, for the E52-P75C-N: $L = 75$ (cm), the protective tubing length $L - 50 = 750 - 50 = 700$ mm.

Terminal box: The permissible temperature is 0°C to 90°C.

Note: The terminals in the cap indicate polarity (A, B, B).

Note: 1. Lead Wire (Compensating Conductor)

- Standard (−20°C to 70°C): Fully vinyl-covered with seven 0.3-dia. conductors (0.5 mm thick) and external dimensions of 2.4 × 4.1.
 - Heat Resistant (0°C to 150°C): Fully glass-wool-covered with seven 0.3-dia. conductors (0.5 mm thick) with external shield of stainless steel and external dimensions of 2.8 × 4.6. The heat-resistant lead wires cannot be used in locations exposed to water or other liquids.
 - Lead Wire Length (M): 1, 2, 4, or 8 m
2. The sleeve resists temperatures ranging between −20°C and 70°C for standard models and 0°C and 100°C for heat-resistant models.

Exposed-terminal Models

E52-IC□B-N

Dimensions

Dimensions are given in millimeters, except for the length (L), which is provided in centimeters.

Note: The length L is in centimeters, but “40” is 40 millimeters.

Therefore, for the E52-CA50B-N: L = 50 (cm), the sheath length $L - 40 = 500 - 40 = 460$ mm.

Exposed-terminal Models

E52-CA□B-N

E52-IC□B-N

Dimensions

Dimensions are given in millimeters, except for the length (L), which is provided in centimeters.

Terminal box: The permissible temperature is 0°C to 100°C.

Note: The length L is in centimeters, but “50” is 50 millimeters.

Therefore, for the E52-CA75B-N: L = 75 (cm), the protective tubing length $L - 50 = 750 - 50 = 700$ mm.

Dimensions

Dimensions are given in millimeters, except for the length (L), which is provided in centimeters.

Note: The length L is in centimeters, but “50” is 50 millimeters.

Therefore, for the E52-CA50C-N: L = 50 (cm), the protective tubing length $L - 50 = 500 - 50 = 450$ mm.

Dimensions

Dimensions are given in millimeters, except for the length (L), which is provided in centimeters.

Permissible Temperature in Dry Air

15 dia.	0°C to 1,400°C

Terminal box: The permissible temperature is 0°C to 90°C.

Note: The terminals in the cap indicate polarity (+ or -).

Note: The length L is in centimeters, but "150" is 150 millimeters.

Therefore, for the E52-PR75C-N: L = 75 (cm), the protective tubing length L - 150 = 750 - 150 = 600 mm.

Note 2: JIS special ceramic (PT0)	Recrystallized alumina, fused alumina, etc.	1,600°C (See note.)

Note: The permissible temperature given for the protective tubing is higher than 1,400°C, but the permissible temperature of the thermocouple element wire is only 1,400°C. Therefore, the protective tubing of the E52-PR□C-N can withstand high temperatures momentarily to the levels given in the table as exceptions, but the element wire will deteriorate quickly if the thermocouple is used regularly at temperatures that exceed the permissible temperature for the element wire.

- Note:**
- The thermocouple is a single wire from the tip to the terminal.
 - Specify the type of screw (i.e., M6, M8, or W1/4) when ordering.
 - The thermocouple is not of airtight construction.
 - OMRON recommends that the tip of the thermocouple is touching the sensing object.

Installation Example

Cut a thread into the workpiece, and screw in the thermocouple while pushing in so that the tip makes complete contact.

Note: E52-CA1DY with the same shape and multiple element wires are also available (E52-CA1DY-40). Refer to page 30 for details.

Installation Method

A Temperature Sensor for Packing Machines has a diameter of 1.0 mm.
To measure the temperature close to the seal surface, mount the Sensor as close as possible to the surface.

The following installation methods are assumed.

Example 1: Groove for Temperature Sensor created in heating plate and Temperature Sensor secured with mounting brackets.

Example 2: Groove for Temperature Sensor created in heating plate and Temperature Sensor secured with a cover.

Example 3: Lateral hole for the Temperature Sensor created in the heating plate and the Temperature Sensor inserted into it.

Use the following brackets or the equivalent to mount a Temperature Sensor for Packaging Machines to a hot plate.

Mounting bracket	Application	Manufacturer	Model number
(1)	1-mm-dia. protective tube bracket	Misumi Corporation	Square Shims ASFCS-series
(2)	Sleeve bracket (S1)	Misumi Corporation	Cable Clips COPU3-20P
		Digi-Key	Cable Clamp RPC1156-ND
	Sleeve bracket (S2)	Misumi Corporation	Cable Clips COPU4-20P
		Digi-Key	Cable Clamp RPC1474-ND

Note: All of the above mounting brackets are SUS304.

Exposed-lead Models with Screw

Specifications

Element type	K (CA)
Element dia.	0.65 mm (single wire)
Class	Class 2 (0.75)
Protective tubing material	SUS304
Thermal contact	Grounded type
Temperature range	0°C to 400°C: K (CA)
Lead wire	Fully glass-wool-covered with external copper shield and external dimensions of approx. 3.1 x 2.0 1/0.65 0°C to 180°C
Terminal shape	Ferrule

- Note:**
1. The thermocouple is a single wire from the tip to the terminal.
 2. Specify the type of screw (i.e., M6, M8, or W1/4) when ordering.
 3. The thermocouple is not of airtight construction.
 4. OMRON recommends that the tip of the thermocouple is touching the sensing object.

Installation Example

Cut a thread into the workpiece, and screw in the thermocouple while pushing in so that the tip makes complete contact.

Note: E52-CA1DF with the same shape and multiple element wires are also available (E52-CA1DF-40). Refer to page 46 for details.

Note: Usage together with the automatic filter adjustment function of E5□D Digital Temperature Controllers is recommended.

Exposed-lead Models

E52-CA□AF

Dimensions

- *1. Lead wires (compensating conductor) (excluding Y-type crimp terminals)
Heat-resistance model (0 to 200°C): PFA glass-wool sheath with stainless outer shield
Flexible, heat-resistance model (0 to 200°C): PFA glass-wool sheath with stainless outer shield
- *2. Temperature range of sleeve: 0 to 260°C
- *3. The sheath can be easily bent. Performance will not be adversely affected even if the sheath is bent somewhat.
Do not bend the sheath beyond the following value.
Minimum bending radius: 2 mm
Bendable section: 8 mm or farther from the end

Compensating Conductors

The material of the Compensating Conductor is the same as or similar to that of the Thermocouple. Therefore, the Thermocouple can be connected to the Compensating Conductor just as if the length of the Thermocouple is to be extended. A standard model for a temperature range between -20°C and 70°C and two types of heat-resistive models for a temperature range between 0°C and 150°C are available.

Be sure to use the compensating conductor for the extension of the length of the thermocouple.

Safety Precautions

Precautions for Correct Use

Precautions

- Make sure that the protective tubing material is suitable for the sensing object. Otherwise, the Temperature Sensor's protective tubing may be corroded by the sensing object, preventing temperature measurement.
- Do not subject the Temperature Sensor's protective tubing to excessive vibration, shock, or weight. Platinum resistance thermometers in particular use extremely fine resistance elements. Using these Temperature Sensors in locations subject to mechanical shock or vibration may result in broken wires.

Lead Wire Extension

- **Platinum Resistance Thermometers**
Use lead wires for extension with the same resistance and same length for each of the three wires. The resistance of the lead wire will affect the indicated temperature when extended. Therefore, use wires with thick cores. (OMRON does not supply lead wires for extension.)
- **Thermocouples**
Always use compensating conductors for thermocouples when extending the lead wires.
Use a compensating conductor designed for the connected thermocouple. If you use a different type of compensating conductor from the thermocouple or if you use normal copper wires to extend, correct temperature measurement will not be possible. Also, do not connect positive and negative incorrectly.
- **Thermistors**
Use cables with thick core wires for the lead wires used for extension. The lead wires do not have polarity.
- Regardless of the type of Temperature Sensor used, resistance to noise will be reduced if the leads are extended. Never extend the lead any further than necessary.

Correct Use

- Select a location for installing the Temperature Sensor in which the temperature distribution of the sensing object will not change.
- Make sure that the length of the Temperature Sensor's protective tubing is sufficient to touch or insert into the sensing object. The length of metallic protective tubing must be at least 20 times its diameter, and the length of non-metallic protective tubing must be at least 15 times its diameter.
The insertion length of the special model for packaging machines (E52-CA□AY S□) is 8 mm or longer.
- Do not repeatedly bend the Temperature Sensor at the same point. The minimum allowable bending radius of sheathed Temperature Sensors is approximately five times the protective tubing diameter. Bending part of the sensor at an acute angle and then extending again may result in broken internal wires or cracks in the element. Do not bend the soldered sections.
The minimum allowable bending radius of the special model for packaging machines (E52-CA□AY S□) is twice the protective tubing diameter.
- Do not bend the protective tubing while measuring low temperatures, which will cause the protective tubing to become fragile.
- Do not bend sheathed Temperature Sensors to within 100 mm of the end to protect the sensing section.
Bending work can be performed on any part that is 8 mm or more from the tip of the special model for packaging machines (E52-CA□AY S□).
- Do not allow the temperature of the section connecting the protective tubing and lead wire to exceed 70°C for exposed-lead models or 100°C for heat-resistive models.
The special model for packaging machines (E52-CA□AY S□) can be used at temperatures of up to 260°C.
- Do not allow the temperature of the terminal box to exceed 100°C for exposed-terminal models or 90°C for enclosed-terminal models.
- Do not subject the ceramic protective tubing of high-temperature thermocouples to sudden heating or cooling. Ceramic protective tubing has a low resistance to thermal shock. Either preheat the protective tubing or gradually heat to the required temperature.

- Do not use standard lead wires in locations subject to strong bending stress or on moving parts.
- **Thermocouples with crimp terminal**
Use the crimp terminal only as a secondary means of securing the thermocouple. The thermocouple junction of the thermocouple is at the crimped section of the crimp terminals, so a temperature difference occurs between the screw fixing section and the thermocouple junction. Confirm the difference in temperature between the location that is to be measured and the temperature measured by the thermocouple in advance at the actual application temperature.

Mounting

1. Install explosion-proof models according to the applicable laws and regulations regarding explosion proofing.
2. Sheathed Temperature Sensors with long protective tubing are coiled for shipping. Straighten the tubing by unwinding it in the opposite direction, without twisting it.
3. Do not excessively bend the section connecting the protective tubing to the lead wires of exposed-lead wires models. Do not insert this section into the sensing object.
4. Do not pull the lead wires with force. Doing so may cause broken wires at the connected section.
5. When measuring at high temperatures that cause the protective tubing to warp, either insert the Temperature Sensor vertically or use an appropriate means to hold the Temperature Sensor in place.
6. To obtain more accurate values, maintain the temperature of the exposed protective tubing to prevent heat loss through heat dissipation.
7. If inductive noise is generated in the Temperature Sensor due to power lines or other source, either change the installation position of the Temperature Sensor and lead wires or provide a shield for the lead wires.
8. Use airtight Temperature Sensors for applications using sensing objects below room temperature, to prevent condensation within the protective tubing and faulty insulation.
9. Do not use the Temperature Sensor in locations that may expose the terminals to water or other liquid.
10. Temperature Sensors are precision devices. Do not subject the Temperature Sensors to shock. Take particular care with products that have ceramic components (ceramic protective tubing, platinum resistance thermometers).
11. Do not use ultrasonic cleaning or otherwise subject platinum resistance thermometers to extreme vibration. Doing so may cause wires to break within a short time. For such environments, consider using sheathed thermocouples, which have a superior vibration-resistant construction compared with platinum resistance thermometers and may be more suitable for the required application, depending on the level of vibration.
12. The life of the protective tubing will be significantly shortened when measuring the temperature of dissolved metals. Select protective tubing material to suit the type of dissolved metal to be measured.
13. Use the following installation methods for applications measuring the temperature of fluids.
 - (a) Install the Temperature Sensor vertically to the flow in tubes with relatively large diameters that enable deep insertion.
 - (b) Install the Temperature Sensor on a diagonal against the flow in tubes with slim diameters that do not enable deep insertion.
 - (c) Install the Temperature Sensor into the convex section of a bend if the tubing diameter is even thinner than in (b).

Use an installation design that provides sufficient strength margin.

Terms and Conditions Agreement

Read and understand this catalog.

Please read and understand this catalog before purchasing the products. Please consult your OMRON representative if you have any questions or comments.

Warranties.

(a) Exclusive Warranty. Omron's exclusive warranty is that the Products will be free from defects in materials and workmanship for a period of twelve months from the date of sale by Omron (or such other period expressed in writing by Omron). Omron disclaims all other warranties, express or implied.

(b) Limitations. OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, ABOUT NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OF THE PRODUCTS. BUYER ACKNOWLEDGES THAT IT ALONE HAS DETERMINED THAT THE PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE.

Omron further disclaims all warranties and responsibility of any type for claims or expenses based on infringement by the Products or otherwise of any intellectual property right. (c) Buyer Remedy. Omron's sole obligation hereunder shall be, at Omron's election, to (i) replace (in the form originally shipped with Buyer responsible for labor charges for removal or replacement thereof) the non-complying Product, (ii) repair the non-complying Product, or (iii) repay or credit Buyer an amount equal to the purchase price of the non-complying Product; provided that in no event shall Omron be responsible for warranty, repair, indemnity or any other claims or expenses regarding the Products unless Omron's analysis confirms that the Products were properly handled, stored, installed and maintained and not subject to contamination, abuse, misuse or inappropriate modification. Return of any Products by Buyer must be approved in writing by Omron before shipment. Omron Companies shall not be liable for the suitability or unsuitability or the results from the use of Products in combination with any electrical or electronic components, circuits, system assemblies or any other materials or substances or environments. Any advice, recommendations or information given orally or in writing, are not to be construed as an amendment or addition to the above warranty.

See <http://www.omron.com/global/> or contact your Omron representative for published information.

Limitation on Liability: Etc.

OMRON COMPANIES SHALL NOT BE LIABLE FOR SPECIAL, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR PRODUCTION OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED IN CONTRACT, WARRANTY, NEGLIGENCE OR STRICT LIABILITY.

Further, in no event shall liability of Omron Companies exceed the individual price of the Product on which liability is asserted.

Suitability of Use.

Omron Companies shall not be responsible for conformity with any standards, codes or regulations which apply to the combination of the Product in the Buyer's application or use of the Product. At Buyer's request, Omron will provide applicable third party certification documents identifying ratings and limitations of use which apply to the Product. This information by itself is not sufficient for a complete determination of the suitability of the Product in combination with the end product, machine, system, or other application or use. Buyer shall be solely responsible for determining appropriateness of the particular Product with respect to Buyer's application, product or system. Buyer shall take application responsibility in all cases.

NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY OR IN LARGE QUANTITIES WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT(S) IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

Programmable Products.

Omron Companies shall not be responsible for the user's programming of a programmable Product, or any consequence thereof.

Performance Data.

Data presented in Omron Company websites, catalogs and other materials is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of Omron's test conditions, and the user must correlate it to actual application requirements. Actual performance is subject to the Omron's Warranty and Limitations of Liability.

Change in Specifications.

Product specifications and accessories may be changed at any time based on improvements and other reasons. It is our practice to change part numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the Product may be changed without any notice. When in doubt, special part numbers may be assigned to fix or establish key specifications for your application. Please consult with your Omron's representative at any time to confirm actual specifications of purchased Product.

Errors and Omissions.

Information presented by Omron Companies has been checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical or proofreading errors or omissions.
