

Desigo™ Room Automation

## Compact room automation stations, BACnet/IP and BACnet/SC, AC 24 V

DXR2.E12P.., DXR2.E12PX.., DXR2.E18..

### For building with increased demands placed on functionality and flexibility in Room Automation and VAV applications.

- Compact, programmable room automation stations for HVAC, lighting, and shading
- BACnet/IP communication (BTL certified)
- BACnet Secure Connect communication
- KNX PL-Link bus to connect sensors, actuators, and operator units (including bus power)
- 2 port Ethernet switch
- USB interface
- Operating voltage AC 24 V
- Mounted on standard DIN rails or on the wall
- Plug-in terminal blocks

### Programmable

The DXR2... room automation stations provide the infrastructure for system and application-specific functions and can be programmed.

### Compact series

The compact build permits mounting in narrow spaces and on standardized rails, and is particularly well suited for compact panels or plants with integrated panel.

### Plug-in terminal blocks

Plug-in terminal blocks to easily exchange room automation stations.

- Room automation applications combining multiple disciplines (HVAC, lighting, shading) into one comprehensive solution. Desigo™ room automation offers the highest degree of flexibility for energy-optimized solutions without sacrificing on comfort.
- Room automation applications can be extended with lighting and blinds applications via the KNX PL-Link.

### Preinstalled applications

- Variable (VAV) and constant (CAV) air volume or variable air volume with a serial or parallel fan powered box
  - with 2-stage electric heating
  - with hot water
  - with hot water and flow temperature control
- Fan coil: Cooling or heating with heat pump, outside air control
  - Single stage, multi-stage, or variable speed fan
  - Single stage, multi-stage, or variable speed compressor
  - Internal or external reversing valve
  - Geothermal or water circuit source
  - Optional hot gas reheater
  - Optional electric (staged or modulating) or hot water reheater or hot gas reheater
- Fan coil: Cooling or heating, cooling and heating (2-pipe) or cooling/heating (4-pipe), supply air minimum limitations, outside air control
- Dual duct variable air volume (VAV)
  - Cold air duct, hot air duct with configurable ventilation delivery
  - Dual duct, dedicated configurable ventilation duct with hot water or electric heating coils
  - Dual duct with constant volume option
- Chilled beam active or passive cooling (2-pipe) or cooling/heating (2-pipe) or cooling/heating (4-pipe)
- Radiant ceiling: Cooling, cooling and heating (2-pipe) or cooling/heating (4-pipe)
- Radiator: Hot water, steam (2-pipe or 4-pipe) or electric stage controlled
- Lighting: Up to 4 different zones
- Blinds: 1 or 2 motors

## Application options

- Separate temperature and volume setpoints for all 4 operating modes
- Single-stage or variable ventilation control (fan powered box)
- Chilled water and hot water valve (2-pipe or 4-pipe)
- Extract air flow acquisition and control

## Functions

The selected application and its parameters as well as input and output configuration determine the room automation station's functionality.

A detailed description of functionality is available in the ABT (Automation Building Tool) online help.

## Communication

- 2-Port Ethernet switch for cost-effective cabling via line topology.
- USB connection for service and commissioning, firmware download, and LAN access.
- The following functions are available with the KNX PL-Link bus:
  - Communication with room operator units, switches, sensors, actuators, and luminaires.
  - Plug-and-play connection of Siemens field devices with KNX PL-Link.
  - Integration of common devices using KNX S-Mode (ETS engineering required).

## LED indication

LED	Color	Activity	Function
RUN	Green	Steady ON	Device is ready for operation
		Steady OFF	Device is not powered
		Regular flashing	Start-up or the program is stopped
	Red	Steady OFF	OK
		Steady ON	Program error Communications error (KNX PL-Link) Hardware fault
		Rapid flashing	Wrong or corrupt software No application loaded
		Blinking per wink command	Physical device identification

SVC (Service button)	--	Short press	Physical identification on the network
	--	Factory reset	

1. Power off the device.
2. Power on the device.
3. Wait until the RUN LED lights up and turns off again, then press the Service button.
4. Keep the Service button pressed until the RUN LED lights up, then release the button. The device restarts.
5. Wait until the device has fully started – unconfigured (green RUN LED on, flashes red)

## Technical design

### Power supply

The power supply provides controlled voltages for inputs and outputs. The room automation stations also supply AC 24 V field supply (DXR2..18, DC 24 V too). The supply is located in the device to simplify wiring and diagnostics.

The processor controls the power supply. This ensures clean conditions for field devices connected to the I/Os during startup, shutdown, and undervoltage.

### Bus power supply

The room automation station includes the bus power for KNX PL-Link. The bus power is switched on by default, but can be switched off via web interface or configuration in the Automation Building Tool (ABT).

The internal KNX PL-Link supply cannot be operated parallel to external power supplies. The internal KNX PL-Link power must be switched off during the engineering phase for external power. This is typically the case if the 50 mA from the internal supply is not enough to supply all devices connected on the KNX PL-Link bus.

## Type summary

The devices are supplied without terminal covers. The terminal covers must be ordered separately. See **Accessories**.

**⚠ CAUTION****National safety regulations**

Failure to comply with national safety regulations may result in personal injury and property damage.

- Observe national provisions and comply with the appropriate safety regulations.

**Engineering****Identification**

Each device has a unique serial number to ensure efficient commissioning. It is provided on the adhesive barcode label. The serial number can be read directly into the engineering tool using a barcode reader.

**Wiring**

Wiring must be sufficiently insulated to the available rated voltage. Sizing and fusing of the wiring depends on the connected load.

**Triac outputs AC 24 V**

Individual Triac outputs may have a max. load of 6 VA (heating up the device). The following possibilities are permitted:

- Multiple motorized actuators with a total of max. 6 VA.
- 1 thermal actuator with 6 VA start load in a cold state, controlled using the algorithm PWM 0...100%.
- 2 thermal actuators with 6 VA start load each in a cold state, controlled using the algorithm PWM 5...50%.

For transformer design (voltage drop off), each thermal actuator must be counted at the full start load, since the Triac outputs can be freely controlled.

The heating sequence and cooling sequence are not normally active at the same time (Exception: Downdraft compensation).

The sum total of the base load, bus power, field supply, and Triacs may not exceed 72 VA (DXR2.E..) or 70 VA (DXR2.M..). Power consumption is 96 VA with pulse width modulation. See Section **Power data**.

For the DXR2.. 24 V variant, the high side switch Triacs (closed the contact at AC 24 V) are used. As a result, the VAV compact controllers GDB181.1E/3 or GLB181.1E/3 can only be set to operating mode "con" via 0...10 V.

**DC 0...10 V outputs**

The DC 0...10 V outputs supply max. 1 mA.

**AC 24 V supply for field devices (V~)**

Actuators (valves, dampers) and active sensors are supplied directly by the device. Separate AC 24 V power supply is only required if field devices consume more than 12 VA (on DXR2.x11.. and DXR2.x12..) or 18 VA (on DXR2.x18).

**DC 24 V power supply for field devices (V+), DXR2.x18 only**

Actuators (valves, dampers) and active sensors are supplied directly by the device. A separate DC 24 V field supply is only required if field devices use more than 2.4 Watts.

**Digital inputs**

Digital inputs are not suitable for operating lighting or blinds. Use the KNX PL-Link pushbutton.

## Mounting

The room automation stations can be snapped onto standard rails or screwed onto a flat surface.

 <b>CAUTION</b>	
	<p><b>Risk of overheating for failure to comply with ambient temperature</b></p> <p>Burning and damage to the device</p> <ul style="list-style-type: none"><li>• Ensure sufficient ventilation to comply with the permissible ambient temperature within the panel or installation box. The temperature must be at least 10 K (18° F) lower outside the installation box.</li></ul>

### Mounting position

Ambient temperature -5...45 °C (23...113°F)	Ambient temperature -5...50 °C (23...122°F)
<ol style="list-style-type: none"><li>1. Overhead</li><li>2. Wall, vertically<ul style="list-style-type: none"><li>– From top to bottom</li><li>– From bottom to top</li></ul></li><li>3. ### Differential pressure sensor

- Avoid bends and pressure when attaching the tube.
- Connect the "+" connection on the side with the higher pressure and the "-" connection on the side with the lower pressure.
- A tube length of 2 m (6 ft) is recommended.

## Installation

 <b>WARNING</b>	
	<p>Risk of fire and injury due to short circuits!</p> <ul style="list-style-type: none"><li>• Adapt as per local regulations the wiring cross section to the rated value of the installed fuse.</li></ul>

### Strain relief

Strain relief protects flexible electrical wiring against mechanical stress.

The wiring must be fixed using cable binders to the tabs on the housing base.

### Terminal cover

Break off the cable inlets to insert the cables to the room automation station.

To take off the terminal cover:

### Operation

The outputs have no electricity when power fails.

USB communications that does not work points to improper grounding of AC 24 V operating voltage (connection  $\perp$  must be grounded).

### Disposal

The device is considered an electronic device for disposal in accordance with European Directive and may not be disposed of as domestic waste.

- Use only designated channels for disposing the devices.
- Comply with all local and currently applicable laws and regulations.

### Warranty

Technical data on specific applications is only valid on Siemens products. Siemens rejects any and all warranties in the event that third-party products are used.
